

Consultant Mock Consultation Script

[Pass out information sheets and obtain consent]

Hello, and welcome. Thank you all for taking the time to join us today. We really appreciate your participation. Today, you'll act as a consultant using a prototype tool to review a client's account activity and provide feedback on how the tool works in practice. Then, we'll have you fill out a questionnaire and a brief open-ended discussion for feedback.

We will be audio-recording this session and screen-recording the interface (without video of you). The recordings will be transcribed, and only the research team will have access. We will keep everything shared here confidential.

If at any point you have questions, please let us know. Your participation is voluntary, and you can leave this room at any time and skip any questions, no questions asked.

How long have you been volunteering with [Tech Clinic]?

Thank you! Today you will be using [Tool], a tool we built that attempts to address a problem consultants run into frequently when clients see unknown devices signed into their accounts. Sometimes, the app or website interface doesn't have enough information about the devices to make sound decisions. Our goal today is to understand if this tool actually accomplishes that. Here is a hosted version of the site. Please feel free to click around wherever you like and explore the site.

[...]

Before I start asking you questions, do you have any clarifying questions about how the tool works?

[Opportunity for participant questions]

Now we'll move on to the mock consultation. For this portion of the session, you'll act as a consultant supporting a client who has come in for a follow-up consultation after finding suspicious activity in their Facebook account during a prior visit. I'll play the role of the client. I am giving you an information sheet with the client's background, their devices, and what was discovered during the first consultation. You will use this and the client Sam's data exports for Facebook and Google to complete five investigative tasks. In [some] folder on the laptop, there are two ZIP files—these are the export. We're interested in seeing how you reason through the

tool and make decisions, not to test your expertise. If you're unsure, just talk through your thought process as you go.

[Pass out "Background & Briefing Sheet." Participant begins tasks. Research team may answer clarifying questions or direct participants back to tasks.]

[Consultant then fills out PSSUQ – attached in other document]

Consultant Semi-Structured Exit Interview Script

Thank you so much. We just have a couple of exit questions to understand your experience. This is an early stage tool, and we will not be offended by any negative feedback!

[Tool-related questions]

1. What do you like about this tool? What works well?
2. What do you not like about it? What should we change?
3. Do you have suggestions for how to change it?
4. Was any particular feature confusing to you? How can it be improved?
5. Was there any particular feature that stood out to you as helpful? What made it stand out?
6. Would you feel comfortable communicating the information synthesized by the tool to a client during a consultation? Is there any language we should improve?
7. Are there any features that might be helpful to add?

[Task-related questions]

8. How relevant were the five tasks to an actual consult? Do you have any remaining questions about the tasks?
9. Were you able to complete the tasks? Did you face any challenges?
10. Was there anything in the UI that was confusing when you tried to complete any of the tasks?
11. Were there any features we could add that would have helped you complete any of the tasks?

[Futuring questions]

12. Have you encountered situations in a consultation where this tool would have been helpful to resolve a client's questions?
13. Are there any other tasks you foresee this tool could help consultants with in the future?
